Krishna Faujdar

Full Stack Developer • Kolkata, India

+91 86190 64840 | krishnafauj@gmail.com | krishnafauj.in | LinkedIn | GitHub

Summary

Full stack engineer at Rezolve.ai who owns features from idea to production: shaping the product, designing Django APIs and data models, building the React/Next.js interface, and shipping with RBAC, AWS SES email and integrations in place. Builds AI products with LangChain/LangGraph. Student Council President, IIIT Raichur; Luminous Hackathon runner-up (2nd of 100,000+).

Education

Indian Institute of Information Technology, Raichur **Aug 2023 – May 2027**
B.Tech, Computer Science and Engineering *Raichur, Karnataka*

Experience

Rezolve.ai **Apr 2026 – Present**
Full Stack & Backend Developer (Full-time) *Kolkata, India*

- Own features end-to-end on an AI-powered recruiting platform, from shaping the product idea to backend logic, APIs and data flow.
- Built scalable email services on **AWS SES** for high-volume, templated transactional email.
- Implemented **role-based access control (RBAC)** to manage user roles and permissions across the platform.
- Build the matching **React / Next.js / TypeScript** frontend and integrate the product with third-party platforms.

Qtanea Solutions **Feb 2026 – Mar 2026**
Software Developer Intern

- Owned a **central-authority platform** for colleges and universities, letting one governing body oversee every institution.
- Built **role-based admin panels** for central-authority, university and college admins, each scoped to its own data.

Soundverse.ai **Dec 2025 – Jan 2026**
Full Stack Developer Intern

- Built core pieces of the AI Studio interface, including the real-time **Audio Player** and **DnaBrowser**, in Next.js and TypeScript.
- Implemented global state with **Redux Toolkit** for user sessions and generation-flow tracking.
- Optimised the "What's New" carousel and dynamic token-usage alerts for faster, smoother UI.

Projects

AgentStudy | *Next.js, Node.js, Express, LangGraph, MongoDB, AWS S3* Live · GitHub

- AI study platform: a teacher assigns a PDF and each student chats with it privately, **without ever accessing the original (often confidential) document**.
- Scoped access control unlocks content chapter-by-chapter or page-by-page, per student or for the whole class.
- In progress: AI interview-style viva sessions where the agent questions students on the material.

COSA Portal – IIIT Raichur | *Django, PostgreSQL (Neon), AWS S3, Vercel* Live · GitHub

- Jira-style grievance and issue tracker for the whole campus; Google sign-in restricted to institute emails.
- Kanban board (Not Started / Under Process / Blocked / Completed) with escalation and overdue filters, plus table view.
- Assignment to office bearers, tagged-member notifications, students joining existing issues, and a full audit history.

SeatSwap | *Node.js, Kafka, WebSocket, MongoDB* Live · GitHub

- IRCTC seat-swapping platform used by tens of thousands of passengers monthly; reduced berth mismatch and cancellations.
- Real-time matching with indexed MongoDB filters and Kafka-batched requests; WebSocket channel to negotiate swaps.

Linear Optimizer (COMA) | *React Native, Expo, TypeScript* App · GitHub

- Mobile app that solves Linear Programming problems, auto-detecting the problem type and visualising each simplex step.

Bosch Power Tools Chatbot | *Flask, LangChain, Sentence-Transformers* May 2024 – Mar 2025

- LangChain chatbot backend; +30% response accuracy and 40% faster responses via optimised vector retrieval.

Technical Skills

Languages: Python, JavaScript, TypeScript, C++, C, SQL
Backend: Django, Node.js, Express, REST APIs, Kafka, WebSockets, RBAC
Frontend: React, Next.js, Redux Toolkit, React Query, Tailwind CSS, React Native
AI / LLM: LangChain, LangGraph, RAG, MCP, OpenAI / Groq APIs
Data & Cloud: PostgreSQL, MongoDB, MySQL, AWS (SES, S3), Docker, Vercel, Render, Git

Leadership & Achievements

- **President, Student Council (Gymkhana), IIIT Raichur** (Sep 2026 – Present): lead the student body and built the COSA Portal for campus grievances.
- **Runner-up, Luminous Hackathon** (2nd of 100,000+): real-time solar analytics dashboards with Grafana, PostgreSQL (Neon) and React.
- **Coordinator, E-Cell** (Oct 2024 – Oct 2025): ran startup workshops and campus-wide entrepreneurship events.
